

DIGITAL DOCUMENTS FOR HAZMAT TRANSPORTATION

E-CMR, loading declaration, washing certificate, compatibility certificate, etc.

BE COMPLIANT WITH NEW REGULATION AND OPTIMIZE PAYMENT CYCLE

- > Compliance with new EU HazMat legislation
- > Simplified digital work-flow for driver and back office
- > Novacom first to be fully certified

First to offer E-CMR and TP1/TP2

NEW LEGISLATION: DIGITAL DOCUMENT FLOW FOR HAZMAT

- > European Union has adopted **new regulation** to optimize monitoring of dangerous goods transportation across the EU and facilitate access to key documents by first responders in the field.
- > For that reason, a **digital infrastructure for transport documentation** has been designed, making E-CMR and loading declaration the new status quo for all HazMat carriers.
- > Samat was the **pioneer in wanting to use digitalization**. Samat, Novacom and MD Service (HazMat management company) worked together to develop the appropriated tools.

GOING DIGITAL: AN OPPORTUNITY FOR CARRIERS

- > Novacom is the first to obtain the new **TP1 & TP2 HazMat transportation certification**, providing a unique advantage to its customer base.
- > Novacom hosts the critical E-CMR and loading declaration data at their TP2 server for **carriers to be available to authorities when required**. The driver application lets the driver show the document to the authorities when required in route.
- > Thanks to the E-CMR **electronic signature process**, invoicing can also be expedited for carriers' final customer. Waiting for the physical documents to return to the office will be a thing of the past.
- > Furthermore, with quick access to all transport information **planning is optimized and the administrative burden of misplacing documents is eliminated**.

E-CMR the way to ensure compliance and optimize payment cycle
